

Please reject NAB's petition 04-160. It is understandable that the NAB would want to protect the interests of its members. It would not be understandable for for the FCC to protect the NAB's interests at the expense of technological and programming innovation offered by satellite radio to the marketplace. Protectionism is often promoted as noble while, specifically in this case with the NAB, it is really only about protecting the interests of the NAB membership. The general public is better served by allowing geunine competition with competing technologies and delivery methodologies. Thank you.
